

## TURNAROUND MANAGEMENT REVIEW

### GENERAL

Does your site have efficient and effective Turnarounds and is your plant performing well after the Turnaround or is there room for sustainable improvement? Turnarounds form an essential part of your Maintenance Management strategy. They need to be well prepared and executed as planned and scheduled. Turnarounds affect almost everybody in your organization including your clients, suppliers and logistics.

Although statutory requirements are dominant for your license to operate, Turnarounds are essential for the availability and reliability of your Assets over the production life-cycle. This means that Turnarounds are critical for the overall success of your Company.

### THE EPS APPROACH

Upfront, an EPS subject matter expert will visit the site or discuss by telecom with the site management team how the review will be structured and which disciplines need to be involved.

The approach is that all aspects of a Turnaround need to be in a perfect condition in order to be overall successful. This means that everything from Management Strategy until post-Turnaround Review is in scope.

A list of key Turnaround information and relevant documentation will be required for preparation and familiarization purposes. Upon receipt of the information, the review team will prepare an agenda for the on-site interviews.

During the on-site visit the experts will give regular updates to the site Management of the observations and progress.

### REPORT OUT

At the end of the on-site visit, the Turnaround experts will prepare a presentation to the management team on the observations and high level recommendations. The presentation is preferably attended by all staff having participated in the activities. Optionally, after the on-site visit, a draft report can be prepared for company comments with all the observations and suggested mitigating actions. The final report will be prepared one month after company's response. At the company's request a follow-up program can be defined to support and guide implementation of mitigating actions. Experienced consultants and "help-desk" support is available to support the company.

### BENEFITS

Very often excessive cost of unsuccessful Turnarounds and consequential production losses have a major impact on the returns of a company. In order to remain competitive, sites have to be operated reliably and at optimal cost. Our experienced experts have the insight and capability to achieve optimal results and to stimulate continuous improvement in all areas of Turnaround Management.

## EPS TURNAROUND TRAINING & SUPPORT

To help close the gaps found in the Turnaround Management Review various help tools can be provided in the form of review, training or implementation help.

- TA business process optimisation,
- TA scope optimisation,
- Critical Path optimisation,
- Risk & Readiness reviews during the various stages of the TA preparation process,
- Post-Turnaround Review,
- Coaching for TA Steering Team members and TA Team members.

For each part of the optimization program a scope document and agenda for the on-site activities will be prepared. During an on-site visit the experts will give regular updates to the site Management of the observations and progress.

## WHY SELECT EPS?

The above support will be provided by principal consultants with 30+ years of world class experience in Engineering, Maintenance, Turnarounds and Operations. EPS experts are available for support on process technology, engineering discipline, turnarounds and maintenance.
